DETAILED ACTION

Oath/Declaration

1. The examiner acknowledges the Oath/Declaration was received on 2/19/08.

Claim Objections

2. Claims 1-4 and 10 have been amended and these changes are acceptable. Thus, the objections have been withdrawn.

Specification

3. The specification has been amended and these changes are acceptable. Thus, the objections have been withdrawn.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

At the end of **claim 10, line 11**, insert **--and--** after the semicolon.

Allowable Subject Matter

5. Claims 1-10 are allowable. The following is an Examiner's Statement of Reasons for Allowance:

DeVito teaches in Fig. 19, elements 123-125; col. 2, line 34, "one or more physiological sensors"; col.1, ll. 27-30, teaches, "electrical measurements of physiological parameters, such as brainwaves (EEG) from an animal"; col. 10, ll. 21-28, teaches, "table of baseline values for the control parameters...animal...interacting with the system...baseline values may then be used for comparison with each parameter set calculated from each epoch...results of this comparison allows particular states of mind, emotions, or other responses to be identified and converted to command code signals to control a given system"; and col. 5, ll. 14-16, teaches, "Hook and loop fasteners allow the headband to be snugly fastened around the subject's head."

Moore teaches, "stimulus-generating, device is housed in a collar placed around the body of an animal, preferably the neck" (col. 4, ll. 30-32); "modifying animal behavior by sound recognition or activation means coupled to meaningful responsive action" (col. 4, ll. 19-23); and "stimulus-generating means...may be aversive or non-aversive in nature...sound producing device...coupled to a recording, or voice stimulation chip, which recording or chip relays verbal commands to the animal" (col. 4, ll. 48-56).

Plotkin teaches a system and method for making live animals appear to talk. Plotkin teaches in col. 2, line 67 – col. 3, line 4, "control circuit and memory...for attachment to collar along with speaker"; col. 4, ll. 12-14, teaches "messages stored in memory comprise of one or more spoken words and may be in any language, accent or voice type"; and in Fig. 2, speaker 30 is positioned near the head of the dog, which would make the output appear to come from the animal. However,

Plotkin's voice messages are pre-recorded and therefore are not converted into signals representing the content of said messages using speech recognition.

Naritoku teaches improving learning in animals by nerve stimulation by applying to the animal's nerve an electrical stimulation signal having parameter values effective in modulating the electrical activity of the nerve in a manner so as to modulate the activity of preselected portions of the brain; col. 9, ll. 62-64, "retention can be...enhanced by experimental treatments such as electrical brain stimulation." However, Naritoku's nerve stimulation does not represent the contents of the vocal messages uttered by a human user.

Thus, none of DeVito, Moore, Plotkin, nor Naritoku, taken alone or in combination, teach, nor fairly suggest in independent claims 1 and 10: "speech recognition means for sending second signals to the processing means, which are representative of the contents of the vocal messages, and stimuli generating means operatively associated to the body of the animal, in particular to its head and/or neck, which receive said second signals from the processing means and send corresponding stimuli to the animal's brain, so as to induce the animal to take determined actions or perceive determined feelings"; nor

"speech recognition means for receiving human-type vocal messages and for sending respective second electric signals to the processing means; the processing means generates, in function of the type of the received second electric signals, stimuli which are sent to the brain of the animal, so as to induce the latter to take determined actions or perceive determined feelings."

Claims 2-9 further limit claim 1, above, and thus contain allowable subject matter.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
